Our process is **simple and effective**. **Observe** the current process, **Identify** the source of the problem, implement the **improvements**. **We guarantee our work**, and provide ongoing monitoring and support.

Systems in Industry (Sii) can make a profoundly positive difference to business operations.

Sii has established a reputation for providing **transformational solutions**

Combining **contemporary management knowledge and expertise** with demonstrable understanding, ability to apply concepts of management, process architecture, resource planning, systems thinking, strategic management, workflow and process re-engineering

We are Business Capability Builders providing functional, relevant, practical and usable systems

Founded to assist organisations **improve internal processes** and manage resources effectively.

Helping fulfil the key role that your **resource planning, people and systems** play in achieving organisational success.

Providing you **specialist knowledge and consulting expertise**

Knowing how operations need to function is imperative in establishing relevant and effective processes and systems.

Sii's Principal is Craig Clancy.

Employing a consultative approach, is a successful manager in his own right having had significant experience in Industry. Spanning over 40 years in Construction, Civil Construction, Resources, Transport and Logistics.
